

WebSphere Application Server for Multiplatforms

Updates for Edge Components

Version 5.1.1

WebSphere Application Server for Multiplatforms

Updates for Edge Components

Version 5.1.1

Note

Before using this information and the product it supports, be sure to read the general information under “Notices” on page 15.

First Edition (June 2004)

This edition applies to:

WebSphere Application Server for Multiplatforms, Version 5.1.1

and to all subsequent releases and modifications until otherwise indicated in new editions.

Order publications through your IBM representative or through the IBM branch office serving your locality.

Chapter 1. Updating Edge Components 5.1

This section contains general instructions for obtaining and installing updates to Edge Components version 5.1 for IBM® WebSphere® Application Server. For details on the content of the fix pack see,

- Chapter 3, “Contents of Edge Components v5.1.1 (Fix Pack 1),” on page 13

The Edge Components documentation library is available from the InfoCenter Web page, <http://www.ibm.com/software/webservers/appserv/ecinfocenter.html>

Related information for WebSphere Application Server products is available from the Library Web page, <http://www.ibm.com/software/webservers/appserv/was/library/>

Self help information for Edge Components is available on the Technote database from the Support page of the WebSphere Application Server Web site, <http://www.ibm.com/software/webservers/appserv/was/support/>.

- click **Technote** listed in the Self Help section of the Support page,
- then select category **Edge Component**

Obtaining an update

You can obtain Edge Components v5.1.1 for the AIX®, HP-UX, Linux, Solaris Operating System, or Windows® system in the form of fix packs.

Link to Edge Components fix packs from the Download section of the WebSphere Application Server Web site Support page, <http://www.ibm.com/software/webservers/appserv/was/support/>

- From the download section of the Support page, click the corrective service release for the fix pack (for example, Version 5.1 Fix Pack 1) and follow the link to the download site.
- Follow the instructions on the site to download the Edge Components Fix Pack.

Use the following installation instructions to install the Edge Components Fix Pack on your system.

Installing an update

For AIX, HP-UX, Linux, Solaris, or Windows platform:

- **Before installing the fix pack update, you must already have an earlier version of 5.1 Edge Components installed on your system.** See “Prerequisite Edge Components version” on page 11 for the required prerequisite Edge Components versions.
- **If you do not already have v5.1 Edge Components installed on your system, install Edge Components v5.1.** See the *Concepts, Planning, and Installation for Edge Components* document for v5.1 installation instructions.

For installing Load Balancer, the only required v5.1 Edge Components prerequisite is the v5.1 license file (nd51Full.LIC) because the fix pack does not provide the license. Obtain the license from installing just the Load Balancer license package from Edge Components v5.1.

To install the Edge Components Fix Pack:

- **For UNIX® systems:** Use the operating system's package installation system (native installer). The Product Setup Program (common installer) does not come with the fix pack.
- **For Windows systems:** Use the InstallShield installation program.

Installing an update on AIX, HP-UX, Linux, or Solaris

Install the packages necessary to update your system by using your operating system's package installation system.

Before you begin

Consider the following items before proceeding with the installation of the fix pack.

- Any pre-5.1 version of the product must be uninstalled from your system.
- With the exception of Load Balancer, to install an update package, the corresponding v5.1 package must already exist on your machine. For example, if the v5.1 Caching Proxy package is not already installed on a machine, then you cannot apply the v5.1.1 Edge Components Fix Pack for the Caching Proxy package.
- For Load Balancer, you are only required to have the Load Balancer v5.1 license package in order to install the v5.1.1 Edge Components Fix Pack for the Load Balancer package.
- For a list of package names and filesets in the Edge Components Fix Pack, see Chapter 2, "Edge Components Fix Pack product notes," on page 9.

Installing the packages for Caching Proxy (AIX, HP-UX, Linux, or Solaris)

Using your operating system's package installation tools, install the packages in the correct order. (See Table 1 on page 7 for a list of all Edge Components packages and the order in which to install them.) The following procedure details the typical steps necessary to complete this task.

Note: If you are updating the Load Balancer component on a UNIX system, refer to "Installing the packages for Load Balancer (AIX, HP-UX, Linux, or Solaris)" on page 4.

1. Become the local superuser root.

```
su - root  
Password: password
```

2. Stop the Caching Proxy process.

On AIX:

```
stopsrc -c -s ibmproxy
```

On HP-UX:

```
kill -9 proxy_PID
```

The term *proxy_PID* is the process identifier for the Caching Proxy process. You can use the following command to determine the PID for the Caching Proxy.

```
ps -e | grep ibmproxy
```

On Linux:

- For SuSE Linux:

```
/etc/init.d/ibmproxy stop
```
- For Red Hat Linux:

```
/etc/rc.d/init.d/ibmproxy stop
```

On Solaris:

```
kill -9 proxy_PID
```

The term *proxy_PID* is the process identifier for the Caching Proxy process. You can use the following command to determine the PID for the Caching Proxy.

```
ps -e | grep ibmproxy
```

3. Change to the directory containing the installation files.

```
cd download_package_directory/
```

4. Install the packages.

The installation order of the packages for the fix pack are:

- a. gskit (Global security kit)
- b. icu (ICU Runtime)
- c. admin (Administrative Runtime)
- d. cp messages (Caching Proxy messages)
- e. cp (Caching Proxy)
- f. documentation (optional)
- g. Web Server Plugins (optional)

System-specific install directives —

- **On AIX:**

```
installp -acXd source package_name
```

where *source* is the directory for the location of the package, and *package_name* is the name of the package.

For example, the following installs the admin package (wses_admin.rte) when the packages reside in the current directory.

```
installp -acXd . wses_admin.rte
```

And, the following installs the admin package when the packages reside in the /tmp directory.

```
installp -acXd /tmp wses_admin.rte
```

When using the System Management Interface Tool (SMIT), use the **install_latest** option. Be sure to set the value in the **COMMIT software updates** field to **yes**.

- **On HP-UX:**

```
swinstall -s /source package_name
```

where *source* is the directory for the location of the package, and *package_name* is the name of the package.

For example,

- The following installs the admin package for Caching Proxy (WSES-ADMIN) when the packages reside in the current directory.

```
swinstall -s /admin WSES-ADMIN
```

Verify the installation of the packages

Issue **swlist** command to list all the packages that you have installed. For example,

- If you install the packages for Caching Proxy (including the Web Server Plugins package), then issue the following to list all installed packages:

```
swlist gsk*
swlist WSES*
swlist WSEC*
```

- **On Linux:**

```
rpm -iv --replacefiles package_name
```

where *package_name* is the name of the package.

For example,

```
rpm -iv --replacefiles WSES_Admin_Runtime-5.1.1-0.686.rpm
```

Do not use the -U option. Note that the --replacefiles option is required for most packages. Using the option with packages that do not require it does not affect their installation. After installation, the previously installed versions of the new packages are still on the machine. Do not uninstall them.

- **On Solaris:**

```
pkgadd -d source package_name
```

where *source* is the directory for the location of the package, and *package_name* is the name of the package.

For example, the following installs the admin package (WSESadmin) when the packages reside in the current directory.

```
pkgadd -d . WSESadmin
```

And, the following installs the admin package when the packages reside in the /tmp directory.

```
pkgadd -d /tmp WSESadmin
```

When installing gskit, the following will install over a previous version of the gskit package

```
pkgadd -a ./admin -d . gsk7bas
```

To use the silent installation, use the -a option and specify an administration file. An administration file named instadm is provided with the packages that you are installing.

After installation, the previously installed versions of the new packages are still on the machine. Do not uninstall them.

Installing the packages for Load Balancer (AIX, HP-UX, Linux, or Solaris)

Uninstall pre-5.1 versions of Load Balancer: Before installing the fix pack, stop and uninstall any existing pre-5.1 version of Load Balancer. Perform the following as required.

Steps for uninstalling pre-5.1 version of Load Balancer

1. Go to a command prompt with root authority.
2. Copy to a backup directory any files that you created and placed in the Load Balancer install directory. Also consider saving any Load Balancer configuration scripts.
3. Stop the Load Balancer Executor by using the command `dscontrol executor stop`. The Executor can still be running even if `dsserver` is stopped. If you receive a message that `dsserver` is not running, start `dsserver` and then issue the command again.
4. Stop `dsserver` by using the command `dsserver stop`.
5. Uninstall all pre-5.1 Load Balancer packages using system-specific commands.

- a. **On AIX:**

To uninstall all of the Load Balancer product packages, use the following command

```
installp -u ibmlb
```

b. **On HP-UX:**

To uninstall all of the Load Balancer product packages, use the following command

```
swremove ibmlb
```

c. **On Linux:**

- To check for previously installed Load Balancer related packages, use the following command

```
rpm -qa | grep ibmlb
```

- To uninstall each Load Balancer package, use the following command

```
rpm -e package_name
```

where *package_name* is the individual Load Balancer package name.

Note: When uninstalling individual packages, they should be removed in the reverse order they were installed.

d. **On Solaris:**

- To check for previously installed Load Balancer related packages, use the following command

```
pkginfo | grep ibmlb
```

- To uninstall each Load Balancer package, use the following command

```
pkgrm package_name
```

where *package_name* is the individual Load Balancer package name.

Note: When uninstalling individual packages, they should be removed in the reverse order they were installed.

Installing the Load Balancer v5.1 Fix Pack:

Note: If you do *not* already have a v5.1 Load Balancer component installed on your system, you are only required to install the Load Balancer v5.1 license file (nd51Full.LIC) prior to installing the fix pack. The license can be obtained by installing just the Load Balancer license package of the v5.1 GA.

Installing the fix pack

1. Go to a command prompt with root authority.
2. Obtain the Load Balancer Fix Pack and place it in a temporary directory.
3. Uncompress and untar the build package. This results in a number of separate filesets.
4. Install the software using system-specific commands, for example —

a. **On AIX:**

- Generate a .toc file, if not already there, issuing the command

```
inutoc .
```

- To install the base package for Load Balancer (ibmlb.base.rte), issue the command

```
installp -acXd . ibmlb.base.rte
```

b. **On HP-UX:**

```
swinstall -s /source package_name
```

where *source* is the directory for the location of the package, and *package_name* is the name of the package.

For example, the following installs the base package for Load Balancer (ibmlb.base) when the packages reside in the current directory:

```
swinstall -s /lb ibmlb.base
```

c. On Linux:

```
rpm -iv --nodeps --replacefiles package_name
```

where *package_name* is the name of the package.

For example, the following installs all the packages (ibmlb*.rpm) for Load Balancer when the packages resides in the current directory.

```
rpm -iv --nodeps --replacefiles ibmlb*.rpm
```

The "nodeps" option allows you to successfully install the packages in any order.

d. On Solaris:

```
pkgadd -d pathname package_name
```

where *pathname* is the directory for the location of the package, and *package_name* is the name of the package.

For example, the following installs the Load Balancer admin package (ibmlbadm) when the package resides in the current directory.

```
pkgadd -d . ibmlbadm
```

5. Restore any configuration files and start scripts which you saved or modified during a previous uninstall.

Edge Components packages

The following table lists all packages delivered with Edge Components and the required order of installation. Install the packages included in the fix pack according to the order specified in this table.

Notes:

1. Not all packages are delivered with the fix pack. Update only the packages that are delivered with the fix pack and that were previously installed on your system.
2. Refer to Chapter 2, "Edge Components Fix Pack product notes," on page 9 for a list of the specific packages included with the fix pack and the AIX filesets and the Solaris and Linux file names that correspond with the packages.
3. On Linux, you can use the "nodeps" option to successfully install all the packages in any order.

Table 1. Package installation details

Components installed	Update the packages (listed generically) in this order
Load Balancer: <ul style="list-style-type: none"> • Dispatcher • Content Based Routing • Site Selector • Cisco CSS Controller • Nortel Alteon Controller • Metric Server Load Balancer Documentation	<ol style="list-style-type: none"> 1. Base 2. Administration 3. License 4. Device Driver (AIX only) 5. LB component(s) 6. Metric Server 7. Load Balancer Documentation (<i>lang</i>)
Caching Proxy	<ol style="list-style-type: none"> 1. gskit7 — Global security kit 2. icu — ICU Runtime 3. admin — Administrative Runtime 4. msg-cp-<i>lang</i> — Messages 5. cp — Caching Proxy
Edge Components Documentation	doc- <i>lang</i>
Web Server Plugins	WSEC-WSP

Installing an update on Windows 2000 and Windows Server 2003

Use the Edge Components Product Setup Program to upgrade Edge Components v5.1 on your Windows operating system as follows:

Note: To prevent the currently installed Load Balancer from starting, be sure to first edit any start scripts you have created to temporarily suppress any commands that start the Load Balancer upon a reboot. Also, ensure that the Load Balancer service is set as **Manual**. Then, restart your Windows machine.

1. Download the Edge Components Fix Pack.
2. Use the Add/Remove program to uninstall the current Load Balancer component, if present.
3. Run the **setup** program by doing one of the following:
 - From a command prompt
 - If installing Caching Proxy and Load Balancer, or if installing only Caching Proxy
 - Change to the directory containing the installation files for your platform and enter **setup**
 - If installing Load Balancer only
 - Change to the lb directory and enter **setup**
 - From the Start menu:
 - a. Click **Run**.
 - b. Click **Browse**.
 - c. If installing Caching Proxy and Load Balancer, or if installing only Caching Proxy, select the directory containing the installation files for your platform and select **setup**.
 - d. If installing only Load Balancer, select the lb directory and select **setup**.

- e. Click **Open**.
 - f. Click **OK**.
4. Enter information as requested by the installation program.

Configuring your system after an update

After you install an Edge Components update, the previous Edge Components configuration is maintained. However, when new functions (enhancements) are delivered with a fix pack, it is often necessary to add directives to configuration files in order to enable the feature.

Note: When updating the Load Balancer component, you must manually save and restore configuration files in order to maintain your previous Load Balancer configuration; see “Installing the packages for Load Balancer (AIX, HP-UX, Linux, or Solaris)” on page 4 for more information.

Rejecting an update

- On Windows systems, use the Edge Components Product Setup Program to remove components. Select **Remove** on the Setup Program’s Maintenance Options window. Then, use the Edge Components Product Setup Program to reinstall the previous version.
- On UNIX systems, to remove a fix pack and return to a prepatched state, uninstall the product and reinstall the previous version.

The mechanism that the AIX operating system provides for rejecting a patch requires that the patch be produced in fix pack format. The Edge Components Fix Pack is provided with product format packaging only, not fix pack format packaging. Therefore, you cannot use the AIX SMIT mechanisms for installing and removing patches. In order to reject a patch on an AIX system, you must uninstall the filesets and then reinstall the previous version.

For most components, when the fix pack is removed, configuration files are saved in the **oldfiles/component** directory and can be used with the reinstalled version of the product in order to maintain the patched configuration in the prepatched version. However for the Load Balancer component, you must manually save configuration files in order to maintain the patched configuration; see “Installing the packages for Load Balancer (AIX, HP-UX, Linux, or Solaris)” on page 4 for more information.

Chapter 2. Edge Components Fix Pack product notes

This section contains information on the packages and components updated and supported operating systems for the fix pack.

List of package file names and filesets in the Fix Pack

The Edge Components Fix Pack includes updates for the following components:

- Caching Proxy
- Load Balancer
- Web Server Plugins

The following tables list the packages delivered with the fix pack and the corresponding package names —

- for AIX systems (Table 2)
- for Linux systems (Table 3 on page 10)
- for HP-UX systems (Table 4 on page 10)
- for Solaris systems (Table 4 on page 10)

Notes:

1. See “Installing an update” on page 1 for instructions on installing the fix pack.
2. See Table 1 on page 7 for the required order which the packages must be installed.

Table 2. AIX package names

Generic package name	AIX fileset
gskit7 (Caching Proxy)	gskkm.rte
icu (Caching Proxy)	wses_icu.rte
admin (Caching Proxy)	wses_admin.rte
msg-cp (Caching Proxy)	wses_cp.msg.lang.base
cp (Caching Proxy)	wses_cp.base
doc (Caching Proxy and Load Balancer)	wses_doc.lang
Web Server Plugins	wsec_wsp.rte
Notes: 1. On AIX the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: de_DE, en_US, es_ES, fr_CA, fr_CH, fr_FR, it_IT, it_CH, ja_JP, Ja_JP, ko_KR, pt_BR, zh_CN, ZH_CN, zh_TW, Zh_TW.	
Base (Load Balancer)	ibmlb.base.rte
Admin (Load Balancer)	ibmlb.admin.rte ibmlb.msg.lang.admin
License (Load Balancer)	ibmlb.lb.license
Device Driver (Load Balancer)	ibmlb.lb.driver
Load Balancer component(s)	ibmlb.component.rte ibmlb.msg.lang.lb
Metric Server (Load Balancer)	ibmlb.ms.rte
Load Balancer Documentation	ibmlb.doc.rte ibmlb.msg.lang.doc

Table 2. AIX package names (continued)

Generic package name	AIX fileset
Notes: <ol style="list-style-type: none"> On AIX, the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: de_DE, en_US, es_ES, fr_CA, fr_CH, fr_FR, it_IT, it_CH, ja_JP, Ja_JP, ko_KR, pt_BR, zh_CN, ZH_CN, zh_TW, Zh_TW. The variable <i>component</i> refers to the substitution of one of the following: disp (dispatcher), cbr (CBR), ss (Site Selector), cco (Cisco CSS Controller) or nal (Nortel Alteon Controller). 	

Table 3. Linux package file names

Generic package name	Linux file name
gskit7 (Caching Proxy)	gsk7bas.rpm
icu (Caching Proxy)	WSES_ICU_Runtime-5.1.1-0. <i>hardw</i> .rpm
admin (Caching Proxy)	WSES_Admin_Runtime-5.1.1-0. <i>hardw</i> .rpm
msg-cp (Caching Proxy)	WSES_CachingProxy_msg_ <i>lang</i> -5.1.1-0. <i>hardw</i> .rpm
cp (Caching Proxy)	WSES_CachingProxy-5.1.1-0. <i>hardw</i> .rpm
doc (Caching Proxy and Load Balancer)	WSES_Doc_ <i>lang</i> -5.1.1-0. <i>hardw</i> .rpm
Web Server Plugins	WSEC_Webserver_Plugins-5.1.1-0. <i>hardw</i> .rpm
Notes: <ol style="list-style-type: none"> The variable <i>hardw</i> refers to the substitution of one of the following: i686 (IA-32 Linux), s390 (s390 Linux), ppc (Linux/PPC64). The variable <i>lang</i> refers to the substitution of one of the following language-specific codes: en_US, pt_BR, zh_CN, zh_TW, fr_FR, de_DE, it_IT, ja_JP, ko_KR, es_ES. 	
Base (Load Balancer)	ibmlb-base-5.1.1-0. <i>hardw</i> .rpm
Admin (Load Balancer)	ibmlb-admin-5.1.1-0. <i>hardw</i> .rpm
License (Load Balancer)	ibmlb-lic-5.1.1-0. <i>hardw</i> .rpm
Load Balancer component	ibmlb-component-5.1.1-0. <i>hardw</i> .rpm
Metric Server (Load Balancer)	ibmlb-ms-5.1.1-0. <i>hardw</i> .rpm
Load Balancer Documentation	ibmlb- <i>lang</i> -5.1.1-0. <i>hardw</i> .rpm
Notes: <ol style="list-style-type: none"> The variable <i>hardw</i> refers to the substitution of one of the following: i386 (IA-32 Linux), s390 (s390 Linux), ppc64 (Linux/PPC64). The variable <i>lang</i> refers to the substitution of one of the following language-specific codes: nlv-de_DE, nlv-es_ES, nlv-fr_FR, nlv-it_IT, nlv-ja_JP, nlv-ko_KR, nlv-pt_BR, nlv-zh_CN, nlv-zh_TW. For English, substitute the variable <i>lang</i> for doc. The variable <i>component</i> refers to the substitution of one of the following: disp (dispatcher), cbr (CBR), ss (Site Selector), cco (Cisco CSS Controller), or nal (Nortel Alteon Controller). 	

Table 4. HP-UX and Solaris package names

Generic package name	HP-UX fileset	Solaris file name
gskit7 (Caching Proxy)	gsk7bas	gsk7bas
icu (Caching Proxy)	WSES-ICU	WSESicu
admin (Caching Proxy)	WSES-ADMIN	WSESadmin

Table 4. HP-UX and Solaris package names (continued)

Generic package name	HP-UX fileset	Solaris file name
msg-cp (Caching Proxy)	WSES-cpmlang	WSEScpmlang
cp (Caching Proxy)	WSES-CP	WSEScp
doc (Caching Proxy and Load Balancer)	WSES-DOC-lang	WSESDoclang
Web Server Plugins	WSEC-WSP	WSECWSP
Notes: <ol style="list-style-type: none"> 1. HP-UX, the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: de_DE, en_US, es_ES, fr_FR, it_IT, ja_JP, ko_KR, pt_BR, zh_CN, zh_TW. 2. On Solaris, the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: br, cn, cw, de, en, es, fr, it, ja, kr. 		
Base (Load Balancer)	ibmlb.base	ibmlbbase
Admin (Load Balancer)	ibmlb.admin	ibmlbadm
License (Load Balancer)	ibmlb.lic	ibmlblic
Load Balancer component(s)	ibmlb.component	ibmlbcomponent
Metric Server (Load Balancer)	ibmlb.ms	ibmlbms
Load Balancer Documentation	ibmlb.lang	ibmlblang
Notes: <ol style="list-style-type: none"> 1. On HP-UX, the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: nlv-deDE, nlv-esES, nlv-frFR, nlv-itIT, nlv-jaJP, nlv-koKR, nlv-ptBR, nlv-zhCN, nlv-zhTW. For English, the variable <i>lang</i> refers to the substitution of doc. 2. On Solaris, the variable <i>lang</i> refers to the substitution of one of the following language-specific codes: deDE, esES, frFR, itIT, jaJP, koKR, ptBR, zhCN, zhTW. For English, the variable <i>lang</i> refers to the substitution of doc. 3. The variable <i>component</i> refers to the substitution of one of the following: disp (dispatcher), cbr (CBR), ss (Site Selector), cco (Cisco CSS Controller) or nal (Nortel Alteon Controller). 		

Prerequisite Edge Components version

Upgrade Edge Components to version 5.1.1 (Fix Pack 1) from the following previous version: Edge Components v5.1

Supported systems

AIX, HP-UX, Linux, Solaris, and Windows: For detailed information on supported systems and prerequisites, refer to the "Hardware and software prerequisites" section in the *Concepts, Planning, and Installation for Edge Components* document, which can be accessed from the Edge Components InfoCenter Web page, <http://www.ibm.com/software/webservers/appserv/ecinfocenter.html>.

For the *most current information* on supported hardware and software for this fix pack, access the following WebSphere Application Server Web page, <http://www.ibm.com/software/webservers/appserv/doc/latest/prereq.html>.

Chapter 3. Contents of Edge Components v5.1.1 (Fix Pack 1)

Edge Components can be updated by applying fix packs. Edge Components v5.1.1 Fix Pack includes all the most recent enhancements and fixes.

Enhancements in Fix Pack 1

Upgrade for GSKit 7

Edge Components v5.1.1 includes a newer version of GSKit 7 that you must use with the Caching Proxy component.

Additional Linux platform support

Edge Components v5.1.1 includes additional Linux platform support.

For the most current information on supported Linux systems and all other supported software requirements for the Edge Components v5.1.1 Fix Pack, access the following WebSphere Application Server Web page,
<http://www.ibm.com/software/webservers/appserv/doc/latest/prereq.html>.

JDK requirement

For the most current information on the JDK software requirement for the Edge Components v5.1.1 Fix Pack, access the following WebSphere Application Server Web page,
<http://www.ibm.com/software/webservers/appserv/doc/latest/prereq.html>.

Mozilla browser requirement on UNIX systems

On UNIX systems: For viewing Edge Components helps, the default browser is Mozilla 1.x.

On Windows systems: For viewing Edge Component helps, the default is the system browser. (This remains unchanged from the earlier v5.1 release.) For detailed information on recommended browsers on Windows systems, refer to the "Using browsers ..." section in the *Concepts, Planning, and Installation for Edge Components* document for v5.1, which can be accessed from the Edge Components InfoCenter Web page,
<http://www.ibm.com/software/webservers/appserv/ecinfocenter.html>

Defects fixed in Edge Components v5.1.1 (Fix Pack 1)

To obtain a complete list of Edge Components defects fixed for this fix pack, refer to the WebSphere Application Server Web site Support page,
<http://www.ibm.com/software/webservers/appserv/was/support/>

- From the Support page, follow the link to the corrective service download site.
- From the download site for the fix pack, link to the file containing the list of defects fixed.

Notices

First Edition (June 2004)

Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the document. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation
Attn.: G7IA./503.
P.O. Box 12195
3039 Cornwallis Rd.
Research Triangle Park, N.C. 27709-2195
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples may include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

If you are viewing this information softcopy, the photographs and color illustrations may not appear.
