

I'm Tom Arthur. I'm in Deep Computing Marketing. The Top 500 list again was announced at Super Computing this year and IBM established leadership. We have 232 of the top 500 systems. We've got the #1 machine, which is the Blue Gene L machine located out at Lawrence Livermore National Lab. 104 racks of Blue Gene L. We've got the number two system which is the new Blue Gene P and UNIX machine that's over in Germany. We dominate every category including the cluster category, the top 10, the top 20, the top 100, every category including clusters in the top 500. So we've established that clearly IBM is a leader in Super Computing.
